

### **Lesson 0**

Display an alert like this, “Hello, *fName lName*” where *fName* is your first name and *lName* is your last name.

Sample output: “Hello, John Smith”

### **Lesson 1**

Input your own values for  $x$  and  $y$ . Add the two values and display the results. The values of  $x$  and  $y$  can be anything you wish to put in.

### **Lesson 2**

Prompt the user to input their name and display it like this, “Hey, *fName*” where *fName* is the name the user entered.

Sample output: “Hey, John!”

### **Lesson 3**

Prompt the user to input their name and age and display it like this, “Hey, *fName* I see you are *age* years old.”

Sample output: “Hey, John I see you are 19 years old.”

### **Lesson 4**

Prompt the user for two values and add them together and display it like this, “ $x + y = ans$ ” where  $x$  is the first value the user entered,  $y$  is the second, and  $ans$  is the two numbers added together.

Sample output: “ $1 + 2 = 3$ ”
